

IN THE ABSTRACT

~~ABSTRACT OF THE DISCLOSURE~~

A method and apparatus for securely accessing digital content is provided. The method of providing secure access to content comprises determining an identification (ID) from a secure medium including content. The method further comprises sending a session key and the ID to a server. Furthermore, the method ~~including~~ includes requesting user authentication and if the user is successfully authenticated, receiving the session key from the server to enable reading of the content on the secure medium.
